Introdução

O Project Base Learning tem como objetivo que os alunos da Unidade Curricular Comunicação de Dados e Redes II e Segurança de Redes e Sistemas, tenham uma noção mais próxima da realidade no que diz respeito tanto à questão da segurança como na questão de todo o planeamento e implementação de uma rede.

O software utilizado para a realização do trabalho foi:

- Cisco Packet Tracer
- Microsoft Excel
- Microsoft PowerPoint
- Microsoft Visio
- GitHub

Objetivos

Implementação Essencial (IE)	Implementação Intermédia (II)	Implementação Avançada (IA)
VLANs ✓	Implementação de Port Security	LACP
Endereçamento IPv4 ✓	Segurança VLANs	VTP ✓
Topologia física e lógica ✓	Private VLAN	NAT/PAT
Convidados = Native VLAN ✓	Segurança STP	VRRP
Redundância de L2 (STP) ✓	Redundância de L3 (routing edifícios <-> DC)	Servidor email ✓
Routing Estático ✓	Servidor FTP ✓	
Router-on-a-stick ✓	Servidores HTTP/HTTPS ✓	
Rede de gestão dos equipamentos de rede ✓	Servidor TFTP para backup de configurações ✓	
Políticas de controlo de acesso		
Servidor DHCP ✓		
Servidor DNS ✓

VTP

Criação dos servidores

Configuração dos clientes

Criação dos Servidores e Configuração dos Clientes

Para a criação do servidor VTP utilizamos o seguinte conjunto de comandos:

```
"vtp version 2"  
"vtp domain Edificio2"  
"vtp password Edificio2"  
"vtp mode server"
```

Para a configuração do VTP como cliente utilizamos o comandos:

```
"vtp mode cliente"
```

```

Atribuição de Portas às VLAN's

Atribuição de Portas

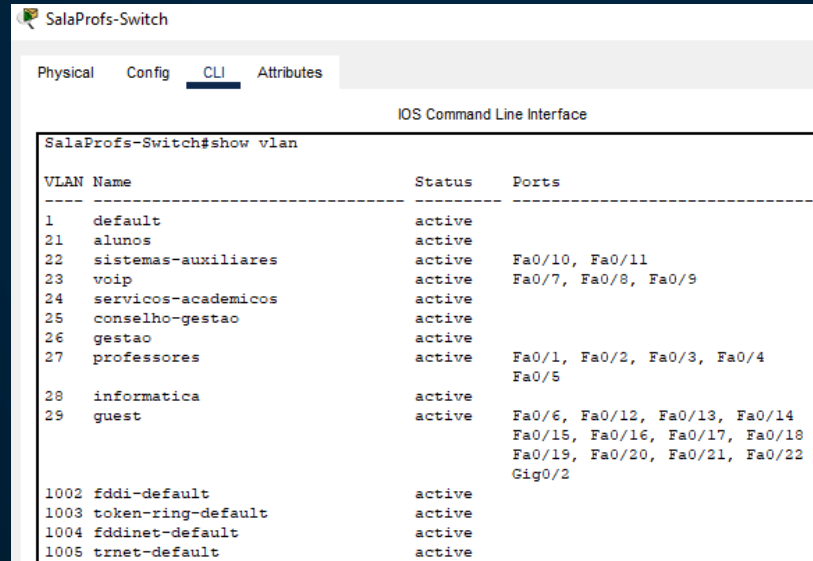

Resultados

Atribuição de Portas e Resultados

Foi utilizado o comando "interface range f0/12-22", "switchport mode access" e "switchport access vlan <nº>" para que as portas destinadas a uma determinada VLAN ficassem atribuídas à mesma, pondo todas as portas desligadas na VLAN guest para que não deixássemos nenhuma porta na Vlan 1.

The screenshot shows the CLI interface of a switch named 'SalaProfs-Switch'. The 'CLI' tab is selected. The command 'show vlan' has been entered, and the output is displayed as a table with columns for VLAN, Name, Status, and Ports.

VLAN	Name	Status	Ports

Relay Agent

O Helper Address serve para tornar o router um DHCP relay, ou seja, permite que o router saiba para onde tem de encaminhar os request's dos DHCP client's. Para isso tivemos de executar o comando "ip helper-address <ip>" nas interfaces logicas dos routers 2 e 3, e no router 1 nas interfaces que ligam aos router's referidos anteriormente.

```

Native VLAN

Configuração

Resultados

Configuração e Resultados

A Native VLAN é uma VLAN que não é etiquetada, ou seja, faz com que exista retrocompatibilidade entre equipamentos mais recentes e mais antigos. A nossa Native VLAN é a VALN destinada aos Convidados, "guest".

Para esta configuração utilizamos o comando "switchport trunk native vlan 14" em todas as interfaces configuradas em modo Trunk nesse Switch.

```
GeralE1-Switch#show interfaces trunk
```

Port	Mode	Encapsulation	Status	Native vlan
Fa0/23	on	802.1q	trunking	14
Fa0/24	on	802.1q	trunking	14
Gig0/1	on	802.1q	trunking	14
Gig0/2	on	802.1q	trunking	14

Servidor TFTP

Configuração

Resultados

Configuração

Nos routers para fazer a copia da configuração do mesmo para o servidor utilizamos o seguinte conjunto de comandos:

- "copy running-config tftp:"
- "192.168.9.6" (este ip corresponde ao ip do servidor TFTP)

Nos switch's para fazer a copia da configuração para o servidor utilizamos os seguintes comandos:

- "interface vlan 26" (vlan de gestão de equipamentos de rede)
- "ip add 192.168.3.139 255.255.255.240" (aqui está o ip e o Mac Address)
- "exit"
- "ip default-gateway 192.168.3.129" (aqui colocamos a default gateway da rede)

- "copy running-config tftp: "
- "192.168.9.6" (ip do servidor)
